

10-1

Skills Practice**Graphing Quadratic Functions**All work on looseleaf,
graphs on this page are OK.

Use a table of values to graph each function.

1. $y = x^2 - 4$

2. $y = -x^2 + 3$

3. $y = x^2 - 2x - 6$

4. $y = -x^2 - 4x + 1$

Write the equation of the axis of symmetry, and find the coordinates of the vertex of the graph of each function. Identify the vertex as a maximum or minimum. Then graph the function.

$$x = \frac{-b}{2a}$$

use this in the quad. function

5. $y = 2x^2$

6. $y = x^2 - 2x - 5$

7. $y = -x^2 + 4x - 1$

8. $y = -x^2 - 2x + 2$

9. $y = 2x^2 + 4x - 2$

10. $y = -2x^2 - 4x + 6$
