Graphing Linear Equations

Graph Linear Equations The graph of a linear equation is a line. The line represents all solutions to the linear equation. Also, every ordered pair on this line satisfies the equation.

ExampleGraph the equation $y - 2x = 1$.Solve the equation for y .

$$y - 2x = 1$$

Original equation

$$y - 2x + 2x = 1 + 2x$$

Add $2x$ to each side.

$$y = 2x + 1$$

Simplify.

Select five values for the domain and make a table. Then graph the ordered pairs and draw a line through the points.

x	$2x + 1$	y	(x, y)
-2	$2(-2) + 1$	-3	$(-2, -3)$
-1	$2(-1) + 1$	-1	$(-1, -1)$
0	$2(0) + 1$	1	$(0, 1)$
1	$2(1) + 1$	3	$(1, 3)$
2	$2(2) + 1$	5	$(2, 5)$

"yTg"
method

Do This Part:

* Solve for Y

* the T-Table

On Looseleaf!! Thanks, Mr. C.
The domain is {All Reals}

**Exercises**

GRAPH ON THIS SHEET OR ON GRAPH PAPER.

Graph each equation. **TP***

* 1. $y = 4$

x	y
-2	4
-1	4
0	4
1	4
2	4

2. $y = 2x$

3. $x - y = -1$

4. $3x + 2y = 6$

5. $x + 2y = 4$

6. $2x + y = -2$

7. $3x - 6y = -3$

8. $-2x + y = -2$

9. $\frac{1}{4}x + \frac{3}{4}y = 6$
