

BE-Alg. 2 | TUESDAY 8-24-10

MENTAL MATH Warming:

① $\frac{2}{3}(8)$ ② $\frac{3}{4}(\frac{1}{2})$ ③ $6(\frac{3}{5})$

④ $\frac{1}{2}(\frac{1}{5})$ ⑤ $-3-6$ ⑥ $-3(\frac{3}{9})$

⑦ $5-(-2)$ ⑧ $\frac{\frac{2}{5}}{4}$ ⑨ $\frac{\frac{5}{8}}{\frac{2}{3}}$

ACT ① If $9(x-9) = -11$ then $x = ?$
KMF
June 09

↓
② If $r = 9$, $b = 5$, and $g = -6$, what does $(r+b-g)(b+g)$ equal?

① $9(x-9) = -11$
 $9x - 81 = -11$
 $+81 \quad +81$
 $\frac{9x}{9} = \frac{70}{9}$
 $x = \frac{70}{9}$

② $\{ [(9) + (5) - (-6)] [(5) + (-6)] \}$
 $[20] [-1] = \boxed{-20}$

Read These Expressions: $x < 6$

$$x > 6$$

$$x \leq 6$$

$$x \geq 6$$

$$x = 6$$

MATH EXPRESSION WITH AN EQUALS SIGN $\Rightarrow$ EQUATION

MATH EXPRESSION WITHOUT EQUALS SIGN $\Rightarrow$ "NOT EQUATION"
INEQUALITY

How Does -6 compare to -5 ?

How Does 6 compare to 5

$$-6 < -5$$

$$6 > 5$$

Positives AND negatives "compare" differently.
So if you are solving an inequality, you
have to worry if you do an undo
that "changes all signs" — let's see...

2

Try $+, -, \cdot, \div \Rightarrow$ OK

Try $\cdot, \div$ WITH A NEGATIVE!

oops $\Rightarrow$ must change ALL signs which includes "flipping the $<, >, \leq, \geq$ symbol"

GRI - Golden Rule of Inequalities

"same as GRE plus, if you multiply or divide by a negative, flip the inequality symbol."

(ex) $5 - 4a > 8$

$-5 \quad -5$

$-4a > 3$

$\frac{-4a}{-4} > \frac{3}{-4}$

$a < -\frac{3}{4}$

💡 WHEN USING GRI,
ASK YOURSELF AT
EACH STEP "DO I NEED TO FLIP?"

$<, > \Rightarrow$ open $\circ$

$\leq, \geq \Rightarrow$ filled $\bullet$

$$\textcircled{\text{Ex}} \quad 3x + 4 \geq 19$$

$$\quad \quad -4 \quad \quad -4$$

$$\frac{3x}{3} \geq \frac{15}{3}$$

$$\boxed{x \geq 5} \text{ or } \{x | x \geq 5\} \text{ or } [5, +\infty)$$

$$\textcircled{\text{Ex}} \quad x > 3 = (3, +\infty)$$

$$\textcircled{\text{Ex}} \quad x < 12 = (-\infty, 12)$$

$$\textcircled{\text{Ex}} \quad x \leq 12 = (-\infty, 12]$$

Ch. 1-5 Solving Inequalities

$$\text{Ex 3} \quad -m \leq \frac{m+4}{9}$$

PG 35

$$9(-m) \leq \frac{m+4}{9} \cdot 9$$

$$\begin{array}{r} -9m \leq m+4 \\ -m \quad -m \end{array}$$

$$\begin{array}{r} -10m \leq 4 \\ \hline -10 \quad -10 \end{array}$$

$$\boxed{m \geq -\frac{2}{5}}$$
