

- ① Define a proportion.
- ② What property of proportions is often used to solve them?
- ③ Define a relation.
- ④ What is the "yTg" method?
- ⑤ What is the most important difference between the graphs of the relation $y = 2x + 1$ when the domain is:
 Ⓐ $x = \{0, 3, 4\}$
 AND Ⓑ $x = \{\text{All Reals}\}$?
